ABSTRACT

This annual report presents results from the Scholastic Aptitude Test (SAT) of the College Board's Admissions Testing Program and the American College Testing (ACT) Program's original and enhanced ACT assessment for prior year graduating seniors. The last decade had brought some recovery over the decline of the previous 10 years in both Texas and national SAT averages, with relatively more improvement in Texas in the last 7 years. The average 1993 Texas SAT total of 885 was 17 points below the national average of 902. The 1993 Texas average ACT composite score was 20.1 compared to a national average of 20.7. Although Texas SAT-tested students had less academic preparation than students nationally, percentages completing 20+ credits improved from 23% in 1991 to 25% in 1992, and up to 27% in 1993, with a fall back to 25% in 1994. Even with the growth in numbers and percentages of ethnic minority students tested in recent years, Texas minority ACT scores have shown some improvement relative to white ACT scores. SAT total and ACT composite scores tended to go up as the values of certain demographic variables rose, and also tended to increase as the values of selected educational variables increased, including district average of students passing all sections of the Texas Assessment of Academic Skills. Generally, the 1992-1993 SAT and ACT results in Texas suggest focusing on improving the academic preparation of students while encouraging test participation. An appendix contains four detailed tables of mean SAT and ACT scores and a glossary of categories used to analyze results. (Contains 4 tables and 17 references.) (SLD)

Austin, Texas 78701-1494
August 1995

PREFACE

Since 1989 the Texas Education Agency has reported selected results from the Scholastic Aptitude Test (SAT) of the College Board's Admissions Testing Program and the American College Testing Program's original and Enhanced ACT Assessment for prior year graduating seniors. This sixth annual report presents these data for the 1992/93 graduating class.

Since the fall of 1990, SAT and ACT score data have been included in Texas' Academic Excellence Indicator System (AEIS). The AEIS was mandated in summer 1990 Texas legislation (Senate Bill 1) to establish a system of school academic performance accountability to local communities and school boards and to state education and legislative officials. Additional legislation passed in the summer of 1991 (House Bill 2885) also mandated the use of SAT and ACT data along with other criteria in the determination of Texas Successful Schools Award System (TSSAS) awards and recognition in the 1991/92-1992/93 biennium. Use of SAT and ACT data for accountability purposes continued in the 1993/94-1994/95 biennium. Note that neither TSSAS nor AEIS employs the rank ordering of campuses or districts based on SAT or ACT scores alone.

ACKNOWLEDGMENTS

This report was prepared by the Texas Education Agency's Division of Policy Analysis and Evaluation in an effort to promote understanding of the college admissions test scores of graduating seniors and to suggest areas for school-level educational attention.

Appreciation is expressed for the capable work done by the American College Testing program staff (ACT assessment data) and Educational Testing Service staff (College Board's Scholastic Aptitude Test score data) in providing the necessary college admissions test score data for this report. In addition, staff in the Austin, Texas, regional offices of both ACT and the College Board have been extremely helpful over the years in facilitating TEA's access to these test score data.

This report was produced with assistance from Cherry Kugle and Cathy Long of the Office of Policy Planning and Information Management, Division of Performance Reporting.

Overview

Results from the Scholastic Aptitude Test (SAT) of the College Board's Admissions Testing Program and the American College Testing Program's Enhanced ACT Assessment, a revised ACT that replaced the original ACT effective October 1989, are reported for 1992/93 graduating seniors. Texas statewide, district, and campus results are displayed along with aggregate results of the nation and other states. Included also are selected test score trends and scores among student groups and among selected groupings of Texas regular and special public school districts as defined by the Texas Education Agency (TEA). The report also contains state, campus, district, and various district grouping summaries of the combined SAT and ACT results, as defined within Texas' Academic Excellence Indicator System (AEIS) (TEA, 1994b). Report purposes are to promote understanding of the diversity existing among graduates tested and to suggest areas for educational action in the schools.

1993 SAT and ACT Results in Review

A brief review of the 1993 SAT and ACT results is provided to help reinforce the targeting of improvement efforts in areas under the most direct control of the schools—that is, student access to educational opportunities and testing participation. For interpretation purposes, note that comparisons among aggregate scores from any educational entity, state, or group are best made when testing participation rates, student characteristics, and education and policy contexts are similar. Highlights below focus on differences between/among Texas and the nation and other states, Texas school districts, various types of students, and students within schools.

- The last decade showed some recovery over the previous decade's decline in both Texas and national SAT averages, with relatively more improvement in Texas within the last seven years. The average 1993 Texas SAT Total of **885** was 17 points below the national average of **902**; in 1994, Texas at **886** was 16 points below the nation at **902**.
- ACT Texas versus national score trends mirrored SAT score trends over the same period. The 1993 Texas average ACT Composite score of **20.1** compared to a national average of **20.7**; in 1994, Texas reached **20.2** compared to the nation at **20.8**.
- Although Texas SAT-tested students had less academic preparation than students nationally, percentages completing 20+ credits improved from 23 percent in 1991 to 25 percent in 1992, up to 27 percent in 1993, and back to 25 percent in 1994. SAT- and ACT-tested ethnic minority students had fewer academic credits than white students, and SAT-tested females completed fewer calculus and physics courses than males.
- Even with growth in numbers and percentages of ethnic minority students tested in recent years, Texas minority ACT scores have shown some improvement relative to white student scores. Although increasing percentages of minority students completed core academic credits, scores of white students still tended to be higher. Texas SAT scores overall continued improving more than scores nationally.

- A relatively higher percentage of 1993 Texas public school graduates took the SAT (49%) compared to the ACT (34%); altogether, slightly over 64 percent took the SAT and/or the ACT, based on unduplicated student counts. These percentages were still below the highest 1993 state percentage (88%) reported for SAT-tested graduates in Connecticut.

- Generally consistent with the separate SAT and ACT mean score results, the percentage of ethnic minority students scoring at or above the SAT and/or ACT criterion has improved, although the percentage of white students was still higher. Also, male students out-performed female students.

- In general, states with lower percentages of SAT-tested seniors tended to show higher state mean SAT scores, and vice versa. In Texas, the simple relationship between district average SAT or ACT scores and district percentage of seniors tested was negligible.

- Considering 1993 SAT and ACT results together for 971 public school districts indicated that the vast majority (872) of districts participated in both SAT and ACT testing; only four districts showed no testing participation. A total of 905 districts had five or more graduates taking the SAT and/or ACT.

- Consistent with previous findings, SAT Total and ACT Composite scores tended to go up as the values of certain demographic variables rose, including district wealth, student family income, district percentage of non-low-income students, district average teacher salary, and district percentage of teachers with advanced degrees.

- In general, SAT and ACT average scores also increased as the values of selected educational variables went up including district average percentage of students passing all sections of the 1992/93 TAAS test, prior year district average SAT and ACT, student letter grade average, and student number of academic courses completed.

- Additional analysis helped underscore key student and campus characteristics related to 1993 SAT scores achieved by students within schools and between schools. For instance, campus average scores tended to increase with increasing campus percentages of students passing TAAS exit-level exams, student enrollments, percentages enrolled in advanced courses, percentages taking the SAT and/or ACT, and school district wealth level. For students within schools, SAT Total scores were positively linked with student plans to "advance place out" of college English, grade-point average, computer exposure for solving math problems, and foreign language course years completed.

Thus, the most general suggestion to the educational community for improving students' SAT and ACT scores, or academic preparation for college, is to focus on improving the academic preparation of all students, while also encouraging testing participation. That is, schools and communities should work on increasing educational inputs rather than faulting school or student demographics, which are less subject to the direct influence of schools.

INTERPRETATIVE ISSUES

For individual students, college admissions tests are measures of developed academic abilities that are best used in conjunction with other measures such as high school grade-point average and courses taken to predict academic performance in college. When examined over time, aggregate changes in these test scores may indicate how well educational institutions are preparing students for college. However, it is always inappropriate to make decisions about individuals, groups of individuals, or educational institutions based on SAT or ACT test scores ***alone***. Because not all graduating seniors take the SAT or ACT, comparisons among educational entities are best made when the percentage of students tested, student characteristics, and education and policy context are similar (also see College Entrance Examination Board, 1988, and the ACT Program, 1991c). Ultimately, the critical outcome is increasing student academic preparedness, as reflected by increased scores, without reducing students' participation (percentages tested) in or access to the testing.

Some data in this report originate from summary reports of state and national test score profiles of public and non-public high school graduates released annually by the College Board (The College Entrance Examination Board, 1994a, 1994b, 1993a, 1993b) and by ACT (The American College Testing Program, 1994a, 1994b, 1993a, 1993b) in late summer. Texas' public school student test score data were provided directly to TEA by the two testing programs. Additional TEA district and campus characteristics data were examined in conjunction with the most recent scores from 1992/93 seniors (through March 1993 for the SAT).

Verbal and Math scores from the SAT range from 200 to 800 and sum to the SAT Total score ranging from 400 to 1600. Since October 1989, the (Enhanced) ACT Assessment consists of English, Math, Reading, and Science Reasoning test scores with a standard score range of 1 to 36; the Composite is the average of these four scores. ***Note that Enhanced ACT scores beginning in 1989/1990, and original ACT scores reported on a different scale before, are noncomparable.***

TEXAS VERSUS NATIONAL TRENDS

The Texas mean SAT Total score (sum of Math and Verbal scores) jumped to 885 in 1993, while the national mean score increased moderately to 902, narrowing the gap between the Texas and national mean scores to 17. During the past 23 years, the maximum gap of 31 points below the national mean occurred in 1984 and in 1987. In 1994 the mean Texas score rose to 886, while the national mean remained at 902. The mean ACT Composite score gap between Texas (20.1 in 1993 and 20.2 in 1994) and the nation (20.7 in 1993 and 20.8 in 1994) remains the least ever in the past 23 years. One reason often given for score gaps concerns the overall academic preparedness among groups of test takers, which sometimes relate to differences in the proportions of traditionally low-scoring, under-prepared examinees. Repeatedly, findings reported by the two testing programs and researchers have shown the tendency for test scores to increase as the amount of academic coursework goes up.

In general, Texas SAT-tested students have completed fewer academic courses than students nationally (27 versus 42 percent, respectively, at the 20+ courses level in 1993), supporting the notion of differential academic preparedness. However, the better prepared Texas students have tended to score just as well or higher than students nationally. Despite the fact that the percentage of SAT-tested ethnic minority students has risen faster in Texas than in the nation, SAT scores of Texas majority and minority students showed greater improvement overall than scores nationally over the past few years. On the ACT, Texas minority student scores continued improving relative to the generally higher majority student scores, and increasing percentages of minority students completed core academic coursework, as defined by ACT. Typically, Texas SAT and ACT score results have shown minority students completing relatively fewer academic courses when compared to majority students—one possible reason for mean score discrepancies among ethnic groups.

College Board reports also indicate that the generally higher scores achieved by men relative to women on the SAT may relate to the rigor of academic courses they take. For instance, disproportionately fewer women have tended to enroll in mathematics courses such as calculus and in natural sciences courses such as physics. For the first time, Class of 1994 ACT Composite scores for women exceeded scores for men by 0.1 point, and the higher scores achieved by women on the ACT English test largely offset the higher scores obtained by men on the ACT Math test. Although 1991 through 1994 Texas ACT Composite scores were virtually the same for males and females, the Math, English, Reading, and Science Reasoning score differences deserve continued scrutiny. For further detail regarding some of the 1992/93 Texas versus national SAT results discussed above, see Table 1; for similar 1992/93 ACT results, see Table 2.

Source of data in table: ACT Program; TEA, PEIMS, actual public school graduate numbers; CEEB (1993c) report of Western Interstate Commission for Higher Education projections, total graduate numbers; TEA, Division of Policy Analysis and Evaluation, analysis of ACT data of Texas public high school graduates.

*Criterion score percentages were based on all graduating seniors; TEA reports before 1992 (e.g., TEA, 1991) based these percentages on just ACT-tested graduating seniors and a criterion score of 25.

AEIS Indicators of Texas College Admissions Test Results

As mentioned previously, Texas' Academic Excellence Indicator System (AEIS) includes measures of combined but unduplicated percentages of graduating seniors tested and percentages meeting a specific score criterion on either the SAT (SAT Total: at or above 1000) or the ACT (ACT Composite: at or above 24). In other words, even if a student took both tests, each individual's participation or criterion score achievement is counted only once in calculating these percentages. Before 1990/91, TEA did not receive the type of data from the two testing programs that allowed calculation of these values.

Table 3 displays the statewide averages for percentages of SAT- and/or ACT-tested 1992/93 public school seniors and the percentages meeting the criterion score on either test. (Note that Table 1 contained these percentages for the SAT; Table 2, for the ACT.) Although females participated more often in SAT and/or ACT testing than males, males met the criterion for either test more often than females. This was consistent with state and national results for both the SAT and ACT separately. Score gaps among ethnic groups were apparent from inspection of the differences in percentages meeting or exceeding criterion scores and also were consistent with separate SAT and ACT results.

Table 3

Number* and Percentage* of SAT- and/or ACT-Tested Graduates and of Graduates At or Above Criterion Score on Either Test (1992/93 Texas Public School Graduates)**

Group	Number* Tested	Number* of Graduates	Percent* Tested	Number* At or Above Criterion**	Percent* At or Above Criterion**
All Groups	96,023	149,575	64.2	25,717	17.2

White	59,564	85,795	69.4	20,684	24.1
Other	4,275	4,789	89.3	1,770	37.0

Source of data in table: TEA, PEIMS, actual public school graduate numbers; TEA, Division of Policy Analysis and Evaluation, analysis of CEEB and ACT program data of Texas public high school graduates with percentages from analyses also reported in AEIS (TEA, 1994a).

*Group numbers may not add to total for all groups because gender and ethnic group for some students was not included or was not known.

**The 1994 Academic Excellence Indicator System college admissions test criterion scores are an SAT Total = 1000 and/or an ACT Composite = 24.

Texas and the Other States

Table 4 presents results of the SAT testing program for the 50 states for 1992/93 (College Entrance Examination Board, 1993c). Average scores on the verbal portion of the test ranged from 396 to 520, and on the mathematics portion from 442 to 583. The percentages of students taking the test ranged from four percent in Mississippi and Utah to 88 percent in Connecticut. These figures were calculated by the College Board based on estimates of the total number of public **and** nonpublic school graduates in each state and in the nation. The Texas graduates tested total was 82,537; Texas public school graduates, 73,821 (see Table 1).

State and District Percentages of SAT-tested Students

As presented in previous years of this report, results indicated that higher 1993 mean SAT scores by state were associated with lower percentages of seniors taking the test. Reasons often given for this relationship are that primarily only the most academically able in the state take the test and/or that the majority of the state's colleges and universities historically prefer or require another admissions exam such as the ACT. In contrast, relatively low mean SAT scores and high percentages tested in states such as Texas appear to occur because more students of varying academic backgrounds are tested, which lowers averages overall.

However, this relationship did not persist for school districts in Texas and for states when other factors were considered. For instance, when Texas was grouped with 23 other states with over 35 percent of seniors tested, the relationship was much lower or barely in evidence. These correlational fluctuations underscore the inaccuracies inherent in making state or other types of simple group comparisons based on test scores alone, especially when the percentages tested, along with other educational and demographic factors of the state or group, are markedly dissimilar. For district mean data within Texas, negligible correlation existed between test scores and percentages tested. Statewide, districts also varied greatly in patterns of SAT versus ACT testing participation, as well as in percentages tested.

Districts and Campuses Within Texas

Combined results for the 971 public school districts and 1,340 campuses with graduating seniors or test score data indicated both SAT- and ACT-tested students for 872 districts and 1,073 campuses. There were 78 districts and 84 campuses with ACT-tested students only, 17 districts and 35 campuses with SAT-tested students only, and 4 districts and 148 campuses showing neither SAT nor ACT participation. Of the 967 districts and 1,192 campuses with SAT and/or ACT participation, 390 districts and 432 campuses showed fewer than five graduates meeting the SAT and/or ACT criterion score, 62 districts and 75 campuses had fewer than five graduates taking either test, and 4 districts and 51 campuses had no graduates according to TEA records. SAT results for each district and campus are shown in Table 1-A in the Appendix; ACT results are shown in Table 2-A; combined ACT and SAT results as defined under AEIS are given in Table 3-A.

District, Campus, and Student Characteristics Data

Results described below are based on summaries of scores grouped by the 26 groupings of districts with similar characteristics shown in Table 4-A in the Appendix. The grouping characteristics are defined in the Glossary. Other results described below but not shown in these tables concern summaries of scores grouped by student-level characteristics, which were obtained for the SAT from the Student Descriptive Questionnaire and for the ACT from the Student Profile Section and High School Course/Grade Information portions of the Student Information booklet.

Many of the separate mean SAT Total and ACT Composite score results and the 1993 combined SAT and/or ACT graduate percentages meeting the score criterion (per AEIS) were consistent with most published findings. For instance, increasing district wealth, increasing student family income, or decreasing percentages of low-income students within districts corresponded with rising mean scores for data from the 1988 through 1993 school years. Other relationships and similarities existed between the college admissions testing data and the (a) district average percentage of students passing all sections of the 1992/93 Texas Assessment of Academic Skills (TAAS) test, (b) district average on the prior year SAT and ACT scores, (c) district average teacher salaries, (d) district average percentage of teachers with advanced degrees, (e) student letter grade average, and (f) student number of academic courses completed. That is, mean scores went up as the values of each of these variables rose.

Results from hierarchical linear modeling statistical analysis of the 1993 Texas SAT scores (Hargrove, Mellor, & Mao, 1995) help underscore key student and campus characteristics related to scores attained within and between campuses. Across separate analyses of SAT Verbal, Math, and Total scores, a substantial amount (68%) of mean score variation between campuses was described consistently by key variables. That is, campus mean Verbal, Math, and Total SAT scores in 1993 were positively associated with percentages of students passing the TAAS exit-level exams (percentage of students passing the TAAS Math exit-level exam for SAT Math scores), student enrollment, percentages enrolled in advanced courses, percentages taking the SAT and/or ACT, and school district wealth level. Campus mean SAT scores also tended to be relatively higher for schools located in north and central regions of the state (for Verbal and Total scores only), campuses with relatively lower percentages of minority students (for Verbal scores only), and campuses with generally lower vocational education expenditures (for Math scores only).

For students within schools, SAT Verbal scores generally rose as students' self-reported writing ability, grade-point average, foreign language course years completed, and family income went up. SAT Math scores tended to go up as student rank in class, computer exposure for solving math problems, and math and geometry course years completed increased. SAT Total scores were positively linked with student plans to "advance place out" of college English, student grade-point average, computer exposure for solving math problems, and foreign language course years completed.

Considerations for Educational Action in the Schools

A distinction should be made between demographic and educational variables related to test scores. This distinction is important because the education community should focus on the attributes that it can most directly influence. In other words, variables such as family income or parent level of education are not under the school's practical domain of control.

In adhering to the distinction above, a number of approaches are suggested for educational action in the schools to improve students' academic preparation for college. These center on encouraging all students to take a greater number of academically challenging courses, increasing the array of rigorous, challenging courses offered, and encouraging more participation in college admissions testing programs. Schools must ensure that the courses offered cover genuinely advanced material and are not simply labeled as advanced courses. For some districts, the most practical option for expanding the array of rigorous course offerings may depend on technology such as distance learning.

Encouraging students to take courses that focus primarily on preparation for taking college admissions tests should be carefully considered. Only well-designed and well-executed supplemental courses focused on improving test-taking strategies, coupled with instruction that broadly addresses verbal or quantitative skills, are recommended for consideration, especially for students from traditionally low-scoring groups. In summary, the educational goal in this context is to better prepare students for college, not simply to raise college admission test scores.

APPENDIX

NOTES ABOUT TABLES IN APPENDIX

RESULTS AND NOTES LISTED IN TABLES

The SAT results listed for each district and campus in Table 1-A include average SAT Verbal, Math, and Total scores of 1993 graduating seniors, number of graduating seniors with SAT scores, total number of graduates, percent of graduates with scores, number and percent of SAT-tested graduates with SAT Total scores of 1000 or higher, and a "note" column for district- and campus-specific comments. Similarly, ACT results are listed by district and campus in Table 2-A, except that average ACT English, Math, Reading, Science Reasoning, and Composite scores are reported rather than SAT scores. Next, Table 3-A shows by district and by campus the number and percentage of SAT- and/or ACT-tested graduates and of graduates scoring at or above the criterion on either test, a "test note" column referencing specific tests, and a "note" column in correspondence with Tables 1-A and 2-A. In all three tables, campus results are the same as district results for districts with only one senior high school.

More specifically, SAT and ACT score data for districts and campuses are not listed in Tables 1-A through 3-A when the number of graduates with scores is less than five because of the instability of statistics based on such low numbers of scores. Campuses with fewer than five students tested are excluded from the tables. A "< 5 tested" note is printed for districts with fewer than five students tested. This precaution also helps to ensure that single sets of scores cannot be identified or linked with any individual. In addition, districts and campuses with fewer than five students scoring at or above the criterion were given a "< 5 high" comment; when it was possible for these score data to be arithmetically inferred from parallel score data from the district and its other campuses, further masking was employed (e.g., "< 10 masked," "< 30 masked," or "< 100 masked"). Districts and campuses with no graduates tested received a "none tested" note, those with a reporting error for number of graduates were given a "grads error" note, and those with no TEA-recorded graduates reflect "no grads/TEA." The test note column in Table 3-A displays "SAT only" or "ACT only" when statistics were based on just one of the two tests; "neither" indicates neither test was taken by students.

Table 4-A presents results of the two testing programs when the district data are aggregated into 26 types of groupings of districts with similar characteristics as defined in the Glossary and by TEA's ANALYZE program. From these, results start with district enrollment groupings and end with groupings of the district percentage of teachers with an advanced degree. These groupings allow examination, by the various district characteristics, of the pattern of district average scores and percentages of students tested for each test separately and for percentages of SAT- and/or ACT-tested graduates and percentages meeting the score criterion on either test, as defined within AEIS (TEA, 1994b).

SOURCES OF DATA FOR TABLES

Overall, data were obtained from the College Board on 79,088 public school graduates in 1993 who participated in the Admission Testing Program's SAT and/or Achievement Tests and from the American College Testing Program on 50,980 students taking the ACT. District and campus results showed a complete set of SAT scores for 73,821 graduates and ACT scores for 50,969 graduates. Although the believed effect is small, some amount of inaccuracy may have resulted in using high school codes supplied by the testing programs to link students' scores to schools and districts (The College Board, Southwestern Regional Office, personal communication, June 15, 1989). In another small set of cases, student miscodings of one of the fields used for student matching may have resulted in more than one set of scores per student (The American College Testing Program, personal communication, February 28, 1990). Such discrepancies may have caused slight imprecision in estimating percentages of graduates tested. The actual computation of percentages of graduates tested and scoring at or above the criterion included the total number of graduating seniors obtained from TEA data files for each district and campus. When graduates tested percentages above 100 resulted in Tables 1-A through 3-A, they were reset to 100.

GLOSSARY OF 1992-93 ANALYZE CATEGORY DESCRIPTIONS

Texas Education Agency
1992-93 ANALYZE Category Descriptions
(In Order of Appearance in Table 4-A)

Enrollment Groupings

A nine-category grouping based on the total number of students enrolled by district as of the Public Education Information Management System (PEIMS) fall collection date (late October of each year). Enrollment excludes students who are served but not enrolled by districts.

District Type

Classification of school districts based on factors such as size, growth rates, and proximity to urban areas as follows:

Major Urban. The state's eight largest metropolitan districts serving the Houston, Dallas, San Antonio, Fort Worth, Austin, Corpus Christi, and El Paso areas.

Major Suburban. Other districts in and around the major urban areas.

Other Central City. Major districts in other large Texas cities.

Other Central City Suburban. Other districts in and around the other large, but not major, Texas cities.

Independent Town. Largest districts in counties with populations of 25,000 to 100,000.

Non-Metro: Fast Growing. Districts not fitting in any of above categories but exhibiting a five year growth rate of at least 20 percent with at least 300 students enrolled.

Non-Metro: Stable. Districts not fitting any of above categories but with an enrollment exceeding the state median.

Rural. Districts not fitting any of above categories; districts either with an enrollment between 300 and the state median and a growth rate less than 20 percent, or with an enrollment less than 300.

Property Wealth

Total taxable property value divided by enrollment, which indicates district ability to raise local funds on a per pupil basis. The property value used is total taxable value for the last completed calendar year—i.e., 1992, as determined by the Comptroller's Property Tax Division (CPTD), whereas enrollment is for the 1992-93 school year. The first wealth grouping shows ten categories; the second simply shows districts above and below state average wealth; the third is a 20-category grouping with each category representing about five percent of the state's students. The six special statutory districts without taxable property wealth form a separate group in all three wealth groupings.

Total Tax Effort

A four-category tax effort grouping of districts defined by the total effective tax rate, which was determined by dividing the last completed calendar year's total levy amount by that year's CPTD total taxable property value. The total effective rate is the sum of the school district maintenance and operations (M&O) rate, including the County Education District (CED) rate, and the interest and sinking fund standardized rate. Rates are expressed per $100 of taxable value. The six special statutory districts without property tax levies appear separately.

Maintenance and Operations Effective Tax Rates

A four-category tax effort grouping of districts showing the maintenance and operation (M&O) effective tax rate, which was determined by dividing the last completed calendar year's M&O levy amount by that year's CPTD total taxable property value. The M&O rate shown includes both the local standardized rate and the CED standardized rate. The six special statutory districts without property tax levies appear separately.

Highest Property Value Category

A 13-category CPTD classification based on property use. These 13 are aggregated into four categories as follows:

Residential. Single-family, multi-family, and residential inventory.

Land. Vacant lots and rural real (taxable).

Oil and Gas. Oil, gas, and minerals.

Business. Commercial and industrial real, commercial and industrial personal, and utilities.

A district is placed into one of the four categories above that represents its greatest total property value. The six special statutory districts without taxable property wealth form a separate group.

Academic Excellence Indicator (AEI) Groups

A 16-category grouping of districts by enrollment size, district wealth above or below the state average, and low income students above or below a level of 40 percent. The six special districts without taxable property wealth form a 17th category. The 16 categories allow districts with similar characteristics to be compared under the Academic Excellence Indicator System (AEIS).

Small/Sparse Adjustment

A four-category grouping of districts based on the small/sparse adjustment amount as a percent of the total adjusted basic allotment amount. A fifth category contains all districts receiving no small/sparse adjustment. This percentage represents the extent to which state funding is adjusted to compensate for small and/or sparsely populated districts.

Cost of Education Index Level

A five-category grouping of districts based on the Cost of Education Index (CEI) level. It reflects geographic variations in costs and prices outside district control.

Operating Cost Per Student

A five-category grouping of districts based on operating cost per student. Operating costs are the sum of all expenditures budgeted for the operation of the district for all funds. The operating expenditures are a subset of the total expenditures; they do not include debt service, capital outlay, or ancillary services expenditures. Per student amounts are the school year expenditures divided by enrollment. The source for budgeted expenditures is the fall submission of PEIMS.

Education Service Center Region

The state is divided into 20 geographic regions; districts within each region are served by an Education Service Center.

TAAS: Percent Passing All Tests Taken

A five-category grouping of districts based on the percent passing the Fall 1992 Texas Assessment of Academic Skills (TAAS) test. For grades 3, 7, and 11, the total number of students passing all sections taken of the TAAS is expressed as a percentage of the total number of students taking one or more tests. This percentage excludes special education students and 3rd graders taking the test in Spanish.

Average SAT Score

A four-category grouping based on district average scores on the 1991/92 Scholastic Aptitude Test (SAT). A fifth category is reserved for districts in which no 1991/92 SAT was administered.

Average ACT Score

A four-category grouping based on district average score on the 1991/92 American College Testing Program's ACT Assessment. A fifth category is reserved for districts in which no 1991/92 ACT was administered.

Student Density

A four-category grouping based on density, or the number of students enrolled per square mile. District square miles were determined through a joint effort by the State Property Tax Board (SPTB), the Texas Education Agency, and the Texas Water Commission. Maps provided by districts to the SPTB were digitized by the Water Commission to determine acreage. The six special statutory districts without available mileage information form a separate group.

Enrollment Change From Prior Year

A five-category grouping based on the growth or decline in district student population over a one year period. Districts with declining enrollment represent one category, while remaining categories show one-year growth rates ranging from "0%-3%" to "10% and over."

Percent African American, Hispanic, and Minority Students

Three six-category sets of groupings according to the ethnic composition of district student populations, as reported on PEIMS. Minority percent is calculated as the sum of all non-white populations expressed as a percentage of the total. Non-white populations include Native American or Alaskan Native; Asian or Pacific Islander; African American, not of Hispanic origin; and Hispanic.

Percent Low Income Students

A six-category grouping according to the district percentage of enrolled students classified as economically disadvantaged on PEIMS as follows:

(a) Eligible for free or reduced-price meals under the National School Lunch and Child Nutrition Program;

(b) From a family with annual income at/below the federal poverty line;

(c) Eligible for AFDC or other public assistance;

(d) Recipient of Pell Grant or comparable state need-based financial assistance program; or

(e) Eligible for programs assisted under Title II of the Job Training Partnership Act.

Average Teacher Experience

A four-category grouping of average teacher experience years computed as total professional experience years for all district teachers divided by total teacher full-time-equivalent (FTE) count.

Average Teacher Salary

A four-category grouping by average district teacher salary computed as the total salary of teachers divided by the total teacher FTE count. Total salary amount does not include career ladder or any other supplement.

Percent of Teachers With Advanced Degrees

A four-category grouping by district percentage of teachers with advanced degrees computed as the FTE count of teachers with a master's or doctoral degree divided by the total teacher FTE count.

Percent Minority Teachers

A six-category grouping according to the minority composition of district teaching populations. Minority percent is calculated by summing all non-white teacher FTEs and dividing by the total teacher FTEs (PEIMS roles 025 or 029).

COMPLIANCE STATEMENT

TITLE VI, CIVIL RIGHTS ACT OF 1964; THE MODIFIED COURT ORDER, CIVIL ACTION 5281, FEDERAL DISTRICT COURT, EASTERN DISTRICT OF TEXAS, TYLER DIVISION

Reviews of local education agencies pertaining to compliance with Title VI Civil Rights Act of 1964 and with specific requirements of the Modified Court Order, Civil Action No. 5281, Federal District Court, Eastern District of Texas, Tyler Division are conducted periodically by staff representatives of the Texas Education Agency. These reviews cover at least the following policies and practices:

(1) acceptance policies on student transfers from other school districts;

(2) operation of school bus routes or runs on a nonsegregated basis;

(3) nondiscrimination in extracurricular activities and the use of school facilities;

(4) nondiscriminatory practices in the hiring, assigning, promoting, paying, demoting, reassigning, or dismissing of faculty and staff members who work with children;

(5) enrollment and assignment of students without discrimination on the basis of race, color, or national origin;

(6) nondiscriminatory practices relating to the use of a student's first language; and

(7) evidence of published procedures for hearing complaints and grievances.

In addition to conducting reviews, the Texas Education Agency staff representatives check complaints of discrimination made by a citizen or citizens residing in a school district where it is alleged discriminatory practices have occurred or are occurring.

Where a violation of Title VI of the Civil Rights Act is found, the findings are reported to the Office for Civil Rights, U.S. Department of Education.

If there is a direct violation of the Court Order in Civil Action No. 5281 that cannot be cleared through negotiation, the sanctions required by the Court Order are applied.

TITLE VII, CIVIL RIGHTS ACT OF 1964 AS AMENDED BY THE EQUAL EMPLOYMENT OPPORTUNITY ACT OF 1972; EXECUTIVE ORDERS 11246 AND 11375; EQUAL PAY ACT OF 1964; TITLE IX, EDUCATION AMENDMENTS; REHABILITATION ACT OF 1973 AS AMENDED; 1974 AMENDMENTS TO THE WAGE-HOUR LAW EXPANDING THE AGE DISCRIMINATION IN EMPLOYMENT ACT OF 1967; VIETNAM ERA VETERANS READJUSTMENT ASSISTANCE ACT OF 1972 AS AMENDED; IMMIGRATION REFORM AND CONTROL ACT OF 1986; AMERICANS WITH DISABILITIES ACT OF 1990; AND THE CIVIL RIGHTS ACT OF 1991.

The Texas Education Agency shall comply fully with the nondiscrimination provisions of all federal and state laws, rules, and regulations by assuring that no person shall be excluded from consideration for recruitment, selection, appointment, training, promotion, retention, or any other personnel action, or be denied any benefits or participation in any educational programs or activities which it operates on the grounds of race, religion, color, national origin, sex, disability, age, or veteran status (except where age, sex, or disability constitutes a bona fide occupational qualification necessary to proper and efficient administration. The Texas Education Agency is an Equal Employment Opportunity/Affirmative Action employer.
